Resource Materials

iThenticate Guidelines

- Prior to assigning reviewers, organizers will need to analyze any matching results over **15%**
- Two areas of concern: plagiarism (copying someone else's work), and lack of originality (copying your own previous published work)
- When assessing a paper, consider:
  - Is there any source with high degrees of match (>15%), or are there just lots of <1% matches of phrases?
  - 50x <1% = no problem
  - 1x 50% = problem
  - If there is a source with a high match, has that source been properly referenced in the paper?
  - Are the matches limited to the introduction, description of the analysis, experimental setup, etc., or are there high matches in the results and conclusions portions of the paper?

iThenticate Guidelines

If you have concerns, discus it with TPC. For feedback from ASME, email toolboxhelp@asme.org

Outcomes can be:

» Reject the paper outright.

» Caution the author about the concerns and request changes. These changes can include properly referencing papers with matches, and/or to reword sections to reduce the degree of outright copying. Organizer should check the final paper to make sure these directions have been followed. Proceed with reviews; reviewers should also comment on matches.

» Let the paper go through with reviews with no special action.
