

1987 Football Team Super Bowl Champions 11-0

The 1987 Football Team had one goal and one goal only- to repeat as Central Mass Division I Super Bowl Champions. Following up on that championship 1986 season, the team ran off eleven straight victories to accomplish that feat and become the only team in Milford High School history to win back to back titles, while winning seventeen straight games- a Milford High School record. Five members of this team went on to play at the Division 1 level in college, including future NFL lineman, junior Jim Pyne.

To say that the team was on a mission would be an understatement. Led by captains Dave DiGirolamo, Marc Curran, Dave Pyne, and John Sturrock, the team worked hard in the weight room during the nine month off season to make themselves better. They possessed a tremendous work ethic, and took nothing for granted. Last year's accomplishment would mean nothing if they didn't leave their mark as arguably the best group of players to ever don the red and white of Milford High.

Head Coach Dennis Breen, Defensive Coordinator John Dagnese and Assistants Kevin Maines, Al Green, Paul Casasanta, Steve Matos and John Mainini made sure that the team stayed focused on their goal. There was no opponent that was better prepared or more mentally ready to play a game than these Scarlet Hawks when they took the field. And, the results proved it.

They were an offensive powerhouse. Led by quarterback Chris Wild, tailback Todd Boldy, Fullback Nathan Elia and receivers Curran, Scott Faessler and Chris Alves, the team averaged over thirty points per game. Their quick strike ability and overpowering line play resulted in most games being decided by halftime. Defensively, the team swarmed over opponents. Along with the previously mentioned players, Adam Miller, Joe Pandozzi and Scott Lanzetta led an attacking style defense that opponents could not overcome. Seldom could a team mount a sustained drive against this group, and the 85 total points allowed for a season, often against the second team, are believed to be another MHS record.
